In a nonclinical sample of adults, higher scores on the CATI measure of personality disorders overall were somewhat more likely to be associated with introversion, intuition, thinking, and/or perceiving.

Abstract

The present study examined how Jung's theory of psychological types (assessed by the MBTI) may relate to personality disorders or their features (measured by the Coolidge Axis II Inventory, CATI). The participants were 332 community-dwelling adults (18-89 years old). A zero-order correlation matrix revealed that personality disorders were clearly more likely to be related to the MBTI poles of introversion, intuition, thinking, and perceiving. All 14 of the personality disorder scales of the CATI had at least one significant relationship to the MBTI, and 2 personality disorders had significant relationships with all four dimensions. It appears that the MBTI may have heuristic value for understanding personality disorders.

The purpose of the present study was to determine how Jung's theory of psychological types, as operationalized by the Myers-Briggs Type Indicator (Myers & McCaulley, 1988) is related to personality disorders, as operationalized by the Coolidge Axis II Inventory (CATI; Coolidge, 1993; Coolidge & Merwin, 1992), a measure of 14 personality disorders. Previous research with the MBTI and personality disorders is sparse, but a recent study of 158 male veterans showed that IT types were more likely to have diagnoses of antisocial and avoidant personality disorders (Ots & Louks, 1997). Ots and Louks also found that IT types were more likely to suffer from

Posttraumatic Stress Disorder (PTSD). In a study of 100 male batterers, ISTJ, ISFJ, and ISFP profile types were found to be the most common (Orr & Guzie, 1996), whereas 64% of 45 PTSD Vietnam veterans had either ISTP, ISTJ, or INTP profiles.

Method

Participants and Procedure. College students were asked to volunteer for the study and to recruit older friends and family members. The students received extra credit for their participation or for recruiting others. The final sample of convenience
