

# The Fairey Barracuda (Orange Series)

Barracuda MB.V (S879), which was ordered as a MB.II from Fairey but was converted on the production line to MB.V status in 1945. This aircraft represented another interim stage in the development of the final MB.V shape, as it had the new wings, and tailplane of increased incidence but the standard MB.II/III fin and rudder shape. (Austro's collection)

The starboard side of one of the prototype Barracuda MB.V aircraft with cowling panels over its Rolls Royce Griffon engine removed. The extra 'bay' fitted to the nose to accommodate the longer engine can be discerned. The exhaust manifold with four fishtail stubs is visible. (National Archives)

The port side of the same aircraft. On this side, the large 'trumpet' shroud for the exhaust, intended to provide sufficient cooling with flame damping for night-flying, is still fitted. The large semi-circular board radiator required by the Griffon can be seen in the lower-forward portion of the cowling. (National Archives)
